

Versione 6.0.0.43

Added support for Multi Environment (Test/Release/Production)

N.B the first branch available for the multienvironment, will be version/6.0

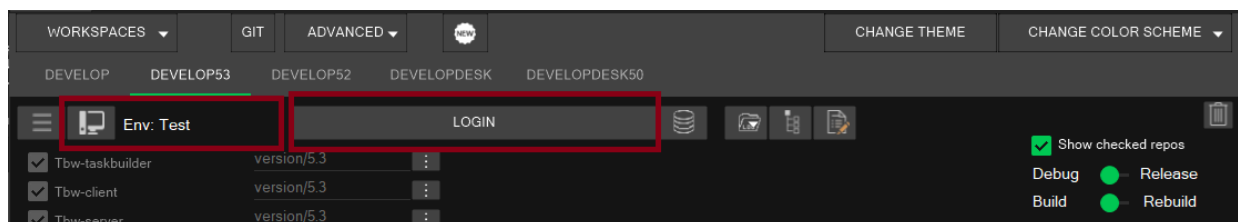

It can be done in two ways:

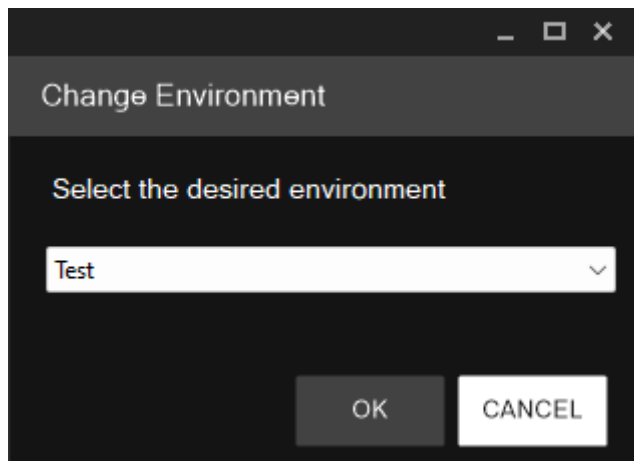

1) While creating a new Workspace,

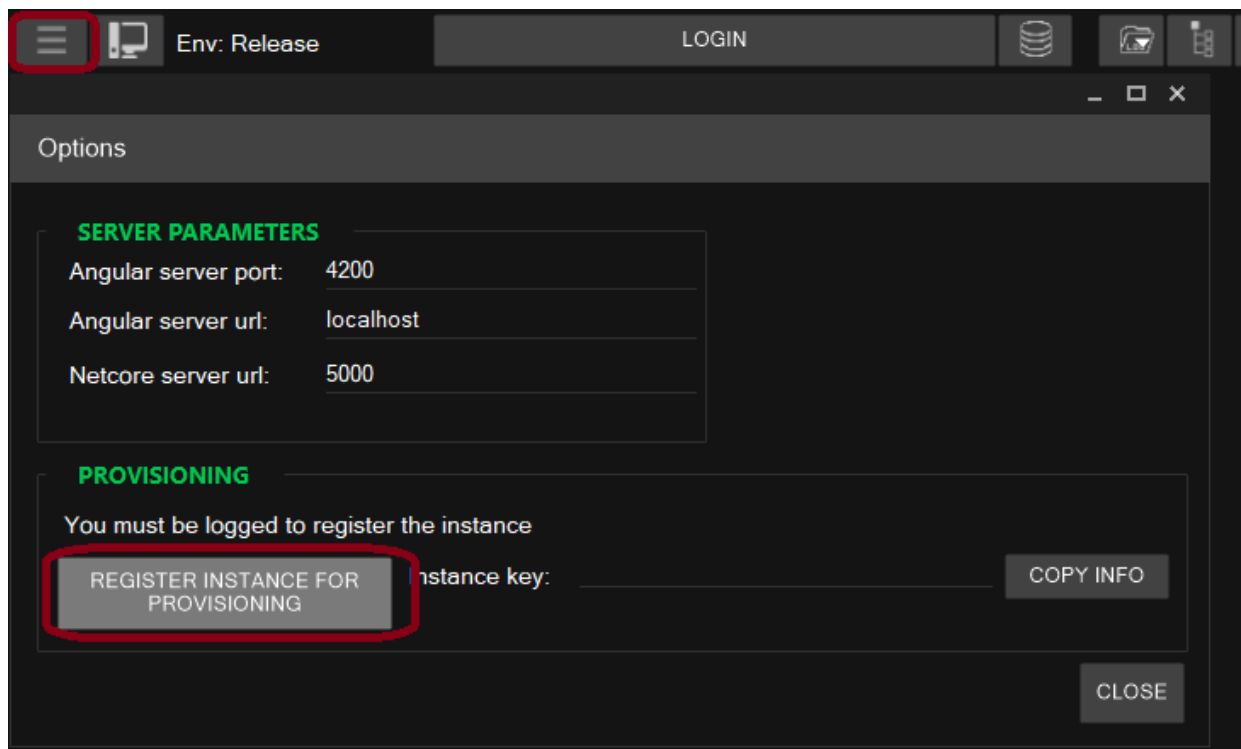

2) In an already created workspace

Use this options carefully: it is not a problem changing environment (as long as you remember to register the instance if needed and recreate the company db), but it is NOT recommend to change the branches of an existing workspace, especially between develop and version/x.y

If you change the environment on an existing workspace, the `instance-config.json` in the main folder will be renamed as a backup (i.e. `instance-config.Test.json`)
If you switch to a new environment for the first time, you'll need to register the instance in the new environment

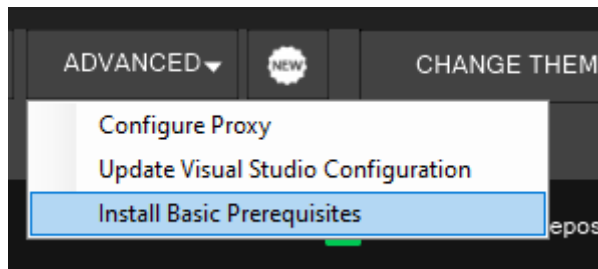

If you switch to an environment with an existing "`instance-config.json`" for that environment, the registration will not be needed

Versione 5.3.0.232

Added support for Visual Studio 2026

Versione 5.3.0.213

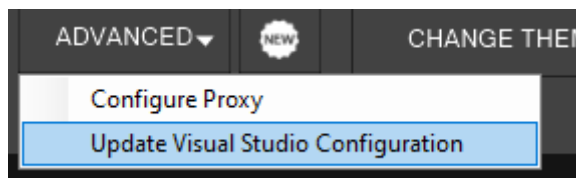

Change advanced configuration, added "install basic prerequisites" option

The same functionality is automatically invoked during the "New Workspace" options

Version 5.3.0.211

Change advanced configuration, added Auto Update configuration.

With this options you can automatically download the latest version of the file .vsconfig from <https://github.com/Microarea/polpen-installer/blob/main/.vsconfig> and then auto update the prerequisites for visual studio 2022

Version 5.3.0.210

New default settings path, moved from %appdata%\GitDevelopmentCreator to c:\programdata\GitDevelopmentCreator\Settings
The new version automatically moved the user settings from the old folder to the new

Version 5.3.0.201

New auto-update mechanism (no longer clickonce)
You can now uninstall the old clickonce version from control panel

Git Development Creator	12/08/2025	5.3.0.45
GitDevelopmentCreator	11/08/2025	5.3.0.45

The new default folder for installation is in c:\programdata\GitDevelopmentCreator
You can now "pin" the GitDevelopmentCreator shortcut anywhere on your computer, (the old version won't update if pinned on the taskbar)

Version 5.1.0.31

Is now possible to execute "dotnet run" command for a single service
